Project Information

Project Title: Grocery Inventory Management System
Project Type: Console Based Application
Programming Language: C
Development Environment: Visual Studio Code, GCC
Version Control: Git & GitHub
Difficulty: Beginner

1. Project Overview

A simple console-based grocery inventory management system developed in C to manage product records in memory using arrays and structures.

2. Problem Statement

Small grocery stores require a simple way to maintain product details such as ID, name, quantity, and price.

3. Objectives

- Add products
- Display products
- Search products
- Update stock
- Delete products

4. Features

Add Product
Display Products
Search Product
Update Stock
Delete Product

5. Modules

Inventory Management Module

- Add Product
- Display Products
- Search Product
- Update Stock
- Delete Product

6. Data Storage

Product records are stored temporarily in arrays during program execution.

7. C Programming Concepts Used

Variables, Arrays, Structures, Functions, Loops, Switch Case, Conditional Statements, String Handling.

8. Software Requirements

Operating System: Windows/Linux

Compiler: GCC

IDE: Visual Studio Code

9. Future Enhancements

File Handling, Billing System, Product Categories, Low Stock Alerts.

10. Conclusion

The project demonstrates the implementation of basic C programming concepts through a simple menu-driven inventory management application.
